## Presentation: **Big risks in the tertiary sector**

The Future of Universities – Adapting to Change, Innovation and Disruption  
AURIMS Conference 2019, 3-5 April, Melbourne

Dr Dale F Cooper

**Broadleaf**

### **Agenda**

- 1 What on earth are big risks?
- 2 Where should we look for big risks?
- 3 Simple scenarios based on trends
- 4 More complex scenarios for strategic thinking
- 5 Value of enterprise risk management
- 6 Final thoughts

AURIMS Conference 2019:  
The future of universities –  
adapting to change,  
innovation and disruption  
2

Broadleaf

## What on earth are big risks?

Broadleaf

### Big risks?

One CEO's view of big risks:

- High levels of risk (combination of consequences and likelihood), with the current controls
- High potential maximum consequences
- Low control effectiveness
- 'What keeps me awake at night?'

AURIMS Conference 2019: The  
future of universities –  
adapting to change,  
innovation and disruption  
4

## Broadleaf

### Some data (not necessarily information!)

Sample of 26 'big risk' surveys and articles

- 5 from higher education
- 368 risks in total
- Quick (and highly subjective) grouping into 27 general categories

AURIMS Conference 2019: The  
future of universities –  
adapting to change,  
innovation and disruption  
5

## Broadleaf

### Overall patterns

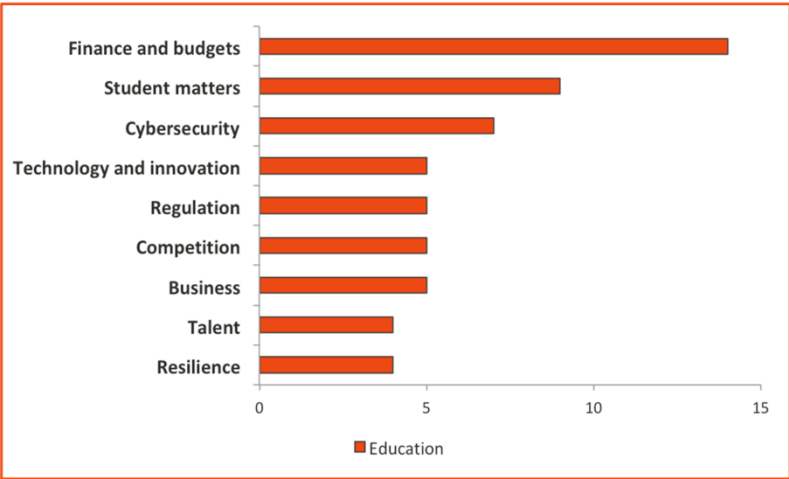

The top 10 groups cover two thirds of the risks

AURIMS Conference 2019: The  
future of universities –  
adapting to change,  
innovation and disruption  
6

## Education sector (5 sets of data)

Funding is a key focus for higher education

AURIMS Conference 2019: The future of universities – adapting to change, innovation and disruption  
7

## Education ‘big risks’

Category	Topics
Finance	<ul style="list-style-type: none"><li>Funding uncertainty, grants, government policy, costs, financial performance</li></ul>
Student matters	<ul style="list-style-type: none"><li>Student experience and welfare</li><li>Recruitment and retention; quality</li></ul>
Cyber security	<ul style="list-style-type: none"><li>Information governance and security; privacy; social engineering attacks</li></ul>
Technology and innovation	<ul style="list-style-type: none"><li>Digital integration and integrity; IT support for the institution; contribution to student experience</li><li>Advanced technology, AI; IT leadership</li></ul>
Regulation	<ul style="list-style-type: none"><li>Compliance; regulatory burdens; government policy</li></ul>
Competition	<ul style="list-style-type: none"><li>Competition for students; international competition</li></ul>
Business	<ul style="list-style-type: none"><li>Organisational performance; staff relations</li></ul>
Talent	<ul style="list-style-type: none"><li>Staff development; competition for qualified faculty</li></ul>

AURIMS Conference 2019: The future of universities – adapting to change, innovation and disruption  
8

## Broadleaf

### What can we learn from this?

There is some agreement about broad categories of big risks

- But great variation in the detail
- And not many surprises

There is no easy consensus

- Risks range from 'nuisances' to existential threats
- There are many points of view

AURIMS Conference 2019: The  
future of universities –  
adapting to change,  
innovation and disruption  
9

## Broadleaf

### The most interesting risks have long-term implications

We understand tactical, operational risks quite well

- They might be messy, but we know how to tackle them in most cases

Strategic risks tend to have longer-term implications and are more difficult to resolve

- The environment is often complex, with many interacting components
- We may not recognise a threat exists, or how serious it might be, until it is upon us

AURIMS Conference 2019: The  
future of universities –  
adapting to change,  
innovation and disruption  
10

Broadleaf

## Where should we look for the big risks?

Broadleaf

## What might indicate a big risk?

Trends leading beyond our current experience

- Boiling frogs

Examples of events, including rare catastrophes, that are outside our experience or that catch us by surprise

- Black Swans
- Perfect storms

AURIMS Conference 2019: The future of universities – adapting to change, innovation and disruption  
12

## Broadleaf

### Characteristics of 'interesting' big risks

Significant uncertainty and many divergent opinions

Potentially large impacts, only partially knowable

Non-linear impacts over extended timeframes

Complex, messy interaction effects

Unpredictable human responses

Situations outside the comfort zone for people and organisations, so existing processes and culture may no longer work

AURIMS Conference 2019: The  
future of universities –  
adapting to change,  
innovation and disruption  
13

## Broadleaf

### Challenges (1)

We need to be careful to avoid long term thinking being confined to the frame of reference we currently use to understand the world

It's not too hard to watch out for the things you know you should be worried about

Being able to spot things you hadn't thought of until they start to emerge is a different challenge

AURIMS Conference 2019: The  
future of universities –  
adapting to change,  
innovation and disruption  
14

## Broadleaf

### Challenges (2)

There are foreseeable long terms trends that we can start to consider immediately

- Increasing population, increasing proportion of the population expecting a higher standard of living, and expecting better education for their children ...

But simple extrapolation of trends is unlikely to be sufficient

- It would be prudent to accept that there will be things we care about that we haven't identified and so can't plan for yet
- We need a way of maintaining a lookout for the unexpected

AURIMS Conference 2019: The future of universities – adapting to change, innovation and disruption  
15

## Broadleaf

### Scenario analysis can provide a useful way forward

#### Observations

- History
- Experience
- Trends

#### Assumptions

- Based on observations
- Extrapolation

#### 'Story'

- Linkages
- Causes & effects

#### Outcomes

- Future state
- Implications
- Key decisions

#### Scenarios

AURIMS Conference 2019: The future of universities – adapting to change, innovation and disruption  
16

Scenarios need to be both credible and useful

## Broadleaf

### Characteristics of a *credible* scenario

The assumptions should be believable

- They should be forward-looking, and take into account anticipated trends and changes
- They may include changes with low likelihoods

The outcomes should be believable

- They should be linked logically to the assumptions
- There should be a good 'story' that explains the links
- The scenario should be internally consistent

AURIMS Conference 2019: The  
future of universities –  
adapting to change,  
innovation and disruption  
17

## Broadleaf

### Characteristics of a *useful* scenario

It should be credible

It should be directly relevant to the organisation

It should have impacts that are important for the organisation

It should stimulate productive thinking about the future

- It should lead to a point where major change or a major decision is inevitable, and thus generate discussion about what changes, threats and opportunities might arise

AURIMS Conference 2019: The  
future of universities –  
adapting to change,  
innovation and disruption  
18

## Simple scenarios based on trends

## Developing scenarios from trends

Start with assumptions and simple projections

- Project current trends
- Include extremes, and 'surprises'

## Broadleaf

### Trends in participation in education

AURIMS Conference 2019: The future of universities – adapting to change, innovation and disruption  
21

1% increase in GDP/capita generates 1.1% growth in higher education participation  
GDP growth in China and India 6-8% pa

### International learners in Australia

AURIMS Conference 2019: The future of universities – adapting to change, innovation and disruption  
22

Broadleaf

## More complex scenarios for strategic thinking

Broadleaf

### Disruptive forces driving change (EY)

1	<b>Changing world of work</b>	Technology disruption in the workplace
2	<b>Blurring industry boundaries</b>	Non-traditional rivals offer educational services
3	<b>Evolving digital behaviour</b>	Learners become consumers of educational services
4	<b>Increasing international competition</b>	Competition for rankings, students and academics
5	<b>Rise of continuous learning</b>	Education as a continuous process

AURIMS Conference 2019: The future of universities – adapting to change, innovation and disruption  
26

Source: EY (2018), Can the universities of today lead learning for tomorrow?  
[www.ey.com/au/futureuniversity](http://www.ey.com/au/futureuniversity)

## Broadleaf

### Scenario drivers (EY)

1	<b>Government role</b>	Activist or hands-off Government or industry funding Capped or uncapped fees
2	<b>Demand conditions</b>	Learner demographics Learner objectives
3	<b>Technology conditions</b>	Technology integration Technology as a service Prominence of AI
4	<b>Sector structure and rivalry</b>	Degree of protection, external rivals Integration with industry Connection of research and learning

## Broadleaf

### Many permutations reduced to four scenarios for 2030 (EY)

... four divergent yet plausible views of Australia's higher education landscape in 2030

#### Champion university

Universities as strategic national assets; traditional degree programs; streamlined operations

#### Commercial university

Financially independent universities; work-integrated learning; close collaboration with industry

#### Disruptor university

Deregulated sector; continuous learners; on-demand micro-certificates; technology disruption; new markets and services; increased competition

#### Virtual university

Integrated universities and vocational institutes; training and employability focus; flexible, online, unbundled courses; shared digital platforms

Developing and selecting scenarios

AURIMS Conference 2019: The future of universities – adapting to change, innovation and disruption

30

## Broadleaf

### Specific things to think about

For each scenario:

- Do we have a suitable business model for creating, delivering and capturing value?
- Could we cope with future disruption, given our current capabilities?
- What do we need to do now to make us more resilient?
- Is there a credible and sustainable transformation pathway from where we are now?
- Should we conduct some experiments to prepare ourselves for different futures?
- Are there opportunities we can exploit?

future of universities –  
adapting to change,  
innovation and disruption  
32

## Broadleaf

### ERM adds value to organisations

There is empirical evidence that sound ERM contributes to:

- Better business performance
- More reliable performance (lower volatility)
- Lower property losses and improved resilience

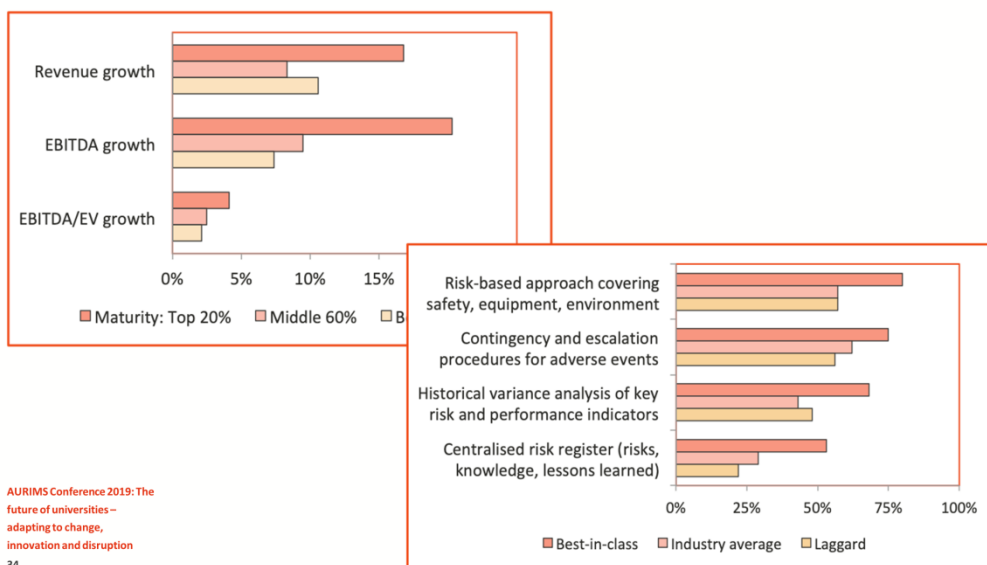

Many of these outcomes are attributed to the support that ERM provides for better decision making

When identifying and addressing the 'big risks', don't let the strategic planners do it by themselves

AURIMS Conference 2019: The future of universities – adapting to change, innovation and disruption

Broadleaf

## Final thoughts

Broadleaf

## Final thoughts

Simple risk management processes are unlikely to be sufficient for 'big risks'

- You need to look where the black swans nest
- Where we are now may not be a good starting point

Use scenarios to identify possible futures

- Conduct risk assessments from these new starting points

Evaluate treatment options from the perspectives of

- Resilience, to deal with threats and major disruptions
- Strategic positioning, to capture opportunities
